Utilities

## About LBM Systems, LLC

**LBM Systems develops, delivers, and supports high quality, leading edge output management software for commercial application developers and end-users of these applications.**

LBM's software products manage your business critical output. Implementing LBM's software will:

- Accelerate document delivery times
- Ensure document integrity
- Control cross-platform print and output queues
- Improve output quality
- Improve document management accuracy
- Reduce costs through efficiency gains in IT infrastructure
- Future-proof your business communications needs

LBM Systems is a New Canaan, Connecticut based company that delivers robust yet scalable output management software products and superior customer service to business customers throughout the world. Every day, LBM Systems adds new customers to its already impressive list of industry leading end-user sites through direct sales, application developer relationships, international distributors, value-added resellers and relationships with hardware vendors.

LBM Systems' flagship product is AXIAR. From simple print queue management and e-forms to advanced conditionally-formatted online output delivery, AXIAR merges LBM's robust software product capabilities into a single market offering.

After its beginning as a pioneer in laser printing technology, LBM Systems developed products for open systems and released its advanced Unix print queue management and e-forms software in the early 1990's. Today, LBM's software formats, delivers and retrieves business critical output across large and small environments, taking advantage of the diverse business applications, servers and output objects already present in customer networks. LBM's software runs on Windows, Unix and Linux servers and delivers output to virtually any networked device, including printers, email gateways, fax gateways, structured output, storage servers and Webcentric destinations.

Contact LBM today to learn how AXIAR will save your company time and money by leveraging your application and infrastructure investments.
